How do I add Google reCAPTCHA to Gravity Forms?

1. Go to <https://www.google.com/recaptcha/admin/create>

A screenshot of the Google reCAPTCHA admin interface. The page title is "Google reCAPTCHA" and the sub-header is "Register a new site". There is a navigation arrow pointing left. A promotional banner for "Now Enterprise ready!" is visible, highlighting features like MFA, spam/fraud protection, and Google Cloud integration, with a "Switch to create a classic key" link. Below the banner, there is a "Label" field with an information icon and a placeholder "e.g. example.com" and a character count "0 / 50". The "reCAPTCHA type" section has two radio button options: "Score based (v3) Verify requests with a score" (which is selected) and "Challenge (v2) Verify requests with a challenge". The "Domains" section has an information icon and a plus sign followed by the text "Add a domain, e.g. example.com". A "Privacy - Terms" link is in the bottom right corner.

5. Then click [Save Settings]

6. You can now navigate to your form where you will find CAPTCHA as an available field.
